CALIPERS**

UNLOADED CALIPERS

Brake service is critical to the bottom line. With this in mind, TruStar has made efforts to provide a caliper that enables the technician to get a vehicle quickly on and off the lift with no comebacks. We have enlisted the capabilities of a world-class caliper only remanufacturing plant. The highly trained and experienced workforce and ISO-certified work procedures produce products that lead the industry in quality and coverage. TruStar's calipers are the best solution for technicians' most frustrating problems.

The UCX logo is located at the bottom center of the page. It features the letters "UCX" in a bold, black, serif font, with a red lightning bolt graphic underneath the letter "X".

TruStar's branded calipers come with hand-installed inlet bolts, negating the possibility of stripped threads.

A unique symbol on the label guarantees that a caliper isn't mis-boxed. When you order a driver's side caliper, you can be certain that's what you'll receive.

Our calipers are preassembled reducing the chance of damaged or missing parts. The caliper is shrink wrapped on a cardboard tray that fits the dimensions of the caliper assuring that the parts arrive complete and intact.

Every caliper is triple checked and pressure tested to virtually eliminate failures that might result in a comeback. This quality control system is reinforced by a unique tag system which indicates thorough review by a quality control expert.

Our late model and medium duty coverage can't be matched.
